DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-7 and 9-14, drawn to an oxidation reactor, classified in class 422, subclass 158.
- II. Claims 8 and 15, drawn to a process for producing (meth)acrylic acids, classified in class 562, subclass 598.
- III. Claims 12-20 drawn to a method for analyzing an easily polymerizable compound by gas analysis, classified in class 422, subclass 83.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus, for example one without a manhole nozzle.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the method for gas analysis does not employ the oxidation reactor except as a

source of analyte and the oxidation reactor cannot be employed to perform the gas analysis.

Page 3

Inventions II and III are directed to related inventions. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are related process claims that share the goal of producing of a gaseous, easily polymerizable product. Art anticipating or rendering obvious one process would not anticipate or render obvious the other. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because each invention requires a search that is not co-extensive with that required for any other invention(see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Application/Control Number: 10/808,546 Page 4

Art Unit: 1621

1. No telephone call was made to request an oral election because of the complexity of

the subject matter.

Applicant is advised that the reply to this requirement to be complete must include (i)

an election of a species or invention to be examined even though the requirement be

traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the

elected invention.

The election of an invention or species may be made with or without traverse. To

reserve a right to petition, the election must be made with traverse. If the reply does

not distinctly and specifically point out supposed errors in the restriction requirement,

the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not

patentably distinct, applicant should submit evidence or identify such evidence now

of record showing the inventions or species to be obvious variants or clearly admit

on the record that this is the case. In either instance, if the examiner finds one of the

inventions unpatentable over the prior art, the evidence or admission may be used in

a rejection under 35 U.S.C.103(a) of the other invention.

Conclusion

2. Claims 1-20 are pending. Claims 1-20 are restricted.

Application/Control Number: 10/808,546

Art Unit: 1621

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul A. Zucker whose telephone number is 571-272-0650. The examiner can normally be reached on Monday-Friday 5:30-2:00.

Page 5

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann R. Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
